

TAKE PART IN RESEARCH

do autistic and non-autistic children process visual information? Help us find out!

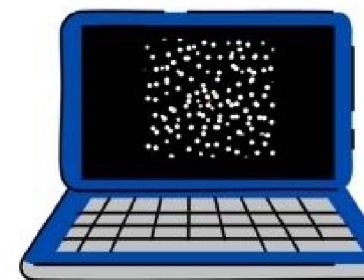

Univer
Read

ers at the University of Reading are finding out how autistic children process visual information, and how this compares to children without a developmental condition. The research aims to understand more about sensory processing in autism.

We are looking for children aged 6 to 14 years, who have either:

- an autism spectrum diagnosis,
OR
- no diagnosed developmental conditions

To take part in a study looking at how they process sensory information

Children will play some fun computer games where they are asked to identify the direction of a set of moving fireflies and the way in which striped beetles are facing. Children will also do some simple logic and reasoning tasks, and parents/guardians will be asked to complete some questionnaires. Families will be given a voucher to thank-you for taking part and we will reimburse travel costs if you come to the university.
